

Flexural Behaviour Of Reinforced Concrete

Influence of length and volumetric percentage of steel fibres on energy absorption of concrete slabs with various concrete strengths is investigated by testing 28 small steel fibre reinforced concrete (SFRC) slabs under flexure. Variables included; fibre length, volumetric percentage of fibres and concrete strength.

Flexural Behaviour of Lightweight Foamed Concrete Beams Reinforced with GFRP Bars Lightweight foamed concrete is a type of concrete characterized by light in self-weight, self-compaction, self-leveling, thermal isolation, and a high ratio of weight to strength.

Flexural Behaviour of Lightweight Foamed Concrete Beams ...

Abstract. The experimental results show that the cyclic flexural behaviour of FRC flexural strength and ductility of fibre-reinforced concrete are significantly improved by the fibre content, the aspect ratio, the fibres orientation and the concrete strength. The increase in flexural strength reaches 242%.

Abstract. Fibre-reinforced cementitious composite (FRCC) is a type of composite that uses high volume of fibres to attain ductile properties. In this research, the effects of two different fibres, namely polyvinyl alcohol (PVA) and basalt, on the mechanical properties of FRCC such as compressive, splitting tensile and flexural strengths were ...

Galal and Enginsal [11] investigated the flexural behavior of concrete masonry beams strengthened with GFRP rebars and concluded that flexural capacity and stiffness of the strengthened concrete ...

Presents a study on the flexural behavior of reinforced concrete beams containing steel fibers. Several series of reinforced concrete beams have been tested. The present test program includes two series of singly reinforced concrete beams and one series of doubly reinforced concrete beams. The fiber contents for each series were varied from 0 to 2 percent by volume. The load was applied in ...

This paper presents the flexural tests performed on reinforced concrete beams made with replacement of natural by recycled fine aggregates, comparing the results obtained in terms of ultimate load and deformation, ductility, bearing capacity and cracking with those from a reference beam, made with conventional concrete.
